Intervention

Outcome measures

Primary outcome

1. Sexual functioning;
2. Depression and other mental health problems;

3. Costs.

Secondary outcome

1. Self-esteem;
2. Relationship satisfaction.

Study description

Background summary

The capacity to form romantic relationships and the sexual health of adolescents in the Netherlands are compromised by several factors, such as young age of first intercourse and adolescent depression. Several thresholds like costs and trust prevent adolescents to seek help for their sexual problems. To overcome these thresholds, brief sex counselling has been developed. It has been used successively since 2006 within the Rotterdam Public Health Service (GGD Rotterdam-Rijnmond), but there is lack of information about the effectiveness and cost-effectiveness of brief sex counselling. Therefore, in the current study we will evaluate the (cost-) effectiveness of brief sex counselling for sexual problems in adolescents between 18 and 25 years of age.

Study objective

Brief sex counselling will improve (mental) health and will be at least as effective as but less expensive than a longer and more intensive sexological treatment.

Study design

1. Baseline, end and follow-up:
 - A. Sexual functioning (Vragenlijst voor het signaleren van Seksuele Disfuncties, Female Sexual Functional Index, International Index of Erectile Function);
 - B. Depression (Center for Epidemiologic Studies depression scale);
 - C. Mental health problems (Brief-Symptom Inventory, Medical Outcomes Study 36-item Short Form Health Survey);
 - D. Costs (cost questionnaire);
 - E. Self-esteem and relationship satisfaction (Self-Esteem and Relationship Questionnaire).
2. Intermediate:
 - 2 - The (cost)effectiveness of brief, anonymous and costfree sex counselling on (men ... 24-06-2025

- A. Sexual functioning (Female Sexual Function Index/International Index of Erectile Function);
- B. Costs (cost questionnaire).

Intervention

1. Brief sex counselling;
2. Intensive sexological treatment;
3. Waitinglist.

Eligibility criteria

Inclusion criteria

Heterosexual males and females with sexual problems between the age of 18 and 25.

Exclusion criteria

1. Prominent psychiatric problems (diagnosed on axis-I or II of DSM-IV-TR);
2. Sexual problems caused by organic malfunction;

3. Medication or drug use;

4. Physical disabilities.

Study design

Design

Study type:	Interventional
Intervention model:	Parallel
Allocation:	Randomized controlled trial
Masking:	Open (masking not used)
Control:	Active

Recruitment

NL	
Recruitment status:	Recruiting
Start date (anticipated):	01-10-2009
Enrollment:	450
Type:	Anticipated

Ethics review

Positive opinion	
Date:	12-08-2009
Application type:	First submission
