Nationaal Trial Register

Brief title

Rembrandt

Health condition

donor site of split-thickness skin graft
bandages
wound healing

Sponsors and support

Primary sponsor: Academic Medical Center Amsterdam

Source(s) of monetary or material Support: Dutch Burn Wound Society

Intervention

Outcome measures

Primary outcome

Time to complete wound healing.

Secondary outcome

1. Pain;

2. Infection rate;
3. Itching;
4. Patient comfort;
5. Costs.

Study description

Background summary

N/A

Study objective

The healing of donor site wounds after split-skin grafting can be promoted by the use of one of five specific wound dressing materials as compared in this trial.

Study design

At various time points during the healing process.

Intervention

One of the following wound dressings will be randomly applied:

1. Paraffin gauze;
2. Film;
3. Hydrocolloid;
4. Alginate;
5. Silicone.
