Outcome measures

Primary outcome

Overview of measures taken in preparation for COVID-19

Secondary outcome

Study description

Background summary

On the first of March the WHO declared the spread of SARS-CoV-2 a pandemic. On the 27th of February 2020 the first Dutch patient was tested positive for SARS-CoV-2. The Emergency Department (ED) is very vulnerable during a pandemic. The additional amount of infected patients presenting to the ED can transcend the ED capacity due to a shortage of space medical material and personnel. Contagion can lead to an increase in absenteeism among personnel, exacerbating the problem. Isolation measures are crucial, but consist of lengthy procedures and labour intensive care. A pandemic therefore requires an appropriate response of ED's to be able to guarantee emergent care that is safe for patients and personnel. Through a questionnaire among Dutch ED's we want to form an overview of measures taken in different Dutch ED's during the first surge of COVID-19 patients.

Study objective

Our hypothesis is that there are large regional differences in ED preparations for COVID-19

Eligibility criteria

Inclusion criteria

Dutch Emergency Department

Exclusion criteria

None

Study design

Design

Study type:	Observational non invasive
Intervention model:	Other
Allocation:	Non controlled trial
Masking:	Open (masking not used)
Control:	N/A , unknown

Recruitment

NL	
Recruitment status:	Recruiting
Start date (anticipated):	29-07-2020
Enrollment:	84
Type:	Anticipated

IPD sharing statement

Plan to share IPD: No

Ethics review

Positive opinion

Date: 03-08-2020
Application type: First submission
